

Abstract

This invention is directed to a system and method for storing print jobs. The system and method comprise acquiring print job data representative of a desired print job, which print job data is comprised of a PDL format associated with a selected printer device and selectively storing the print job data in a selected storage location or cabinet in a storage medium. The system and method further comprises acquiring print status information including data representative of a name associated with the print job data and data representative of a size of the print job data and selectively storing the print status information associatively with the print job data. The system and method also comprises selectively communicating the print job data to generate an image for display in an associated display device and selectively communicating the print job data to the selected printer device to obtain a printout thereof.
